

Your open source career starts here:

How to prepare for the LPI exams?

Linux Professional Institute (LPI) does not have an „official“ study method, and we earn no revenue from training. Instead we recognize that everyone learns differently and we encourage our candidates to find what works for them best. What matters most is that when you come to take our exams, you know the material. If you don't know you won't pass.

Learning Materials

Creative Commons licensed, LPI Learning Materials are free to download and share. Written by open source experts, these materials can be the foundation of courses or a path to self-study.

TRAINER**

Our network of hundreds of Training, Academic, and Publishing Partner offers study paths using various kinds of training and media, in classrooms and by video. They support open source professionalism and offer a great way to prepare.

Also, simple self-study

Many people already skilled in the subject matter find that just reviewing the objectives for each exam offers enough information to indicate what they need to know. Or just teach yourself using any Linux computer.
